Date	03 October 2026
Team ID	**SWTID-2026-7735**
Project Name	**Auto Ticket Classification using Flow Designer**
Maximum Marks	2 Marks

Project Design Phase

Problem – Solution Fit Template

Problem – Solution Fit Template:

The Problem-Solution Fit ensures that the solution realized in Flow Designer genuinely solves the school helpdesk's triage bottlenecks.

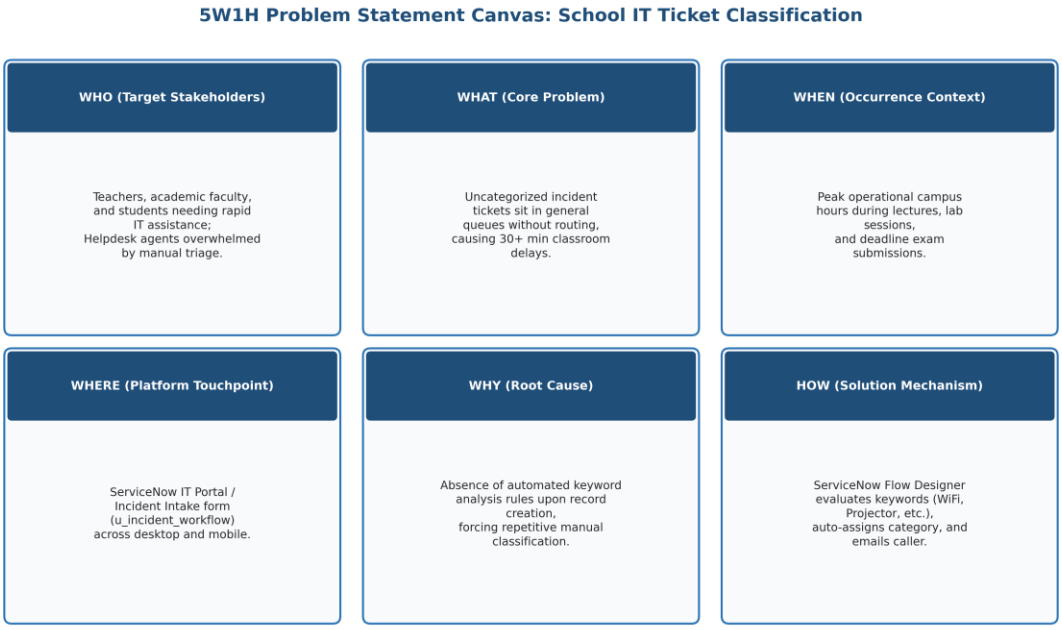

Figure 3.1: Problem-Solution Fit Matrix & 5W1H Alignment Canvas

Canvas Building Block	Analysis for Auto Ticket Classification in ServiceNow
1. Target Customer Segment	Primary: School teachers, professors, and students across academic campuses. Secondary: School IT helpdesk administrators, technical coordinators, and department heads.
2. Critical Customer Problems	• Uncategorized Tickets: Tickets enter general pools without category, delaying technician assignment. • Classroom Disruption: Projector or Wi-Fi failures stall lectures while waiting for

	manual triage. • Administrative Burden: IT agents spend 25-35% of working hours manually reading and classifying tickets. • Lack of Acknowledgment: Callers receive no immediate confirmation that their ticket was recorded.
3. Existing Alternatives & Flaws	• Manual Helpdesk Triage: Slow, prone to human error, and completely bottlenecks during morning peak periods. • Complex Form Dropdowns: Forcing non-technical teachers to navigate 30+ IT categories leads to misclassification. • Phone Calls & Walk-ins: Highly interruptive, unorganized, and leaves zero audit trail.
4. Proposed Solution & Features	• No-Code Flow Designer Automation: Evaluates keywords ('Wi-Fi', 'Projector', 'Password', 'Slow Computer') in Short Description. • Custom Isolated Table: 'Incident WorkFlow' (u_incident_workflow) with Auto-Numbering (INC prefix). • Dependent Choice Architecture: Subcategory choices dynamically filter based on assigned Category. • Instant Automated Email: Sends personalized confirmation to caller immediately upon classification.
5. Unique Value Proposition (UVP)	Zero-touch, real-time ticket categorization and immediate caller acknowledgment delivered through 100% native no-code ServiceNow Flow Designer.
6. Channels of Engagement	ServiceNow Self-Service Portal, Form Designer UI, Classroom Desktop Bookmarks, and automated email notifications.
7. Key Performance Indicators (KPIs)	• 100% automated classification accuracy for defined keyword incidents. • Reduction in ticket categorization turnaround from 35+ minutes to under 2 seconds. • 100% automated email notification delivery to callers. • 30% reduction in manual helpdesk administrative hours.
8. Unfair Advantage & Sustainability	Built entirely on ServiceNow standard platform capabilities without external paid APIs or custom scripting, ensuring seamless upgrades.
