Date	03 October 2026
Team ID	**SWTID-2026-7735**
Project Name	**Auto Ticket Classification using Flow Designer**
Maximum Marks	2 Marks

Project Design Phase

Proposed Solution Template

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template to define the solution blueprint.

S.No.	Parameter	Description & Solution Specification
1	Problem Statement (Problem to be solved)	Educational institutions face persistent delays in IT support due to manual incident triage. Incoming tickets for common classroom issues (Wi-Fi, projectors, password resets, slow computers) require IT personnel to manually open, read, categorize, and route tickets.
2	Idea / Solution Description	Implement an automated incident triage and notification system on ServiceNow using Flow Designer. When a student or teacher logs an issue in custom table 'u_incident_workflow', the flow triggers immediately, analyzes the Short Description for defined keywords, updates Category and Subcategory with dependent dictionary integrity, and dispatches an automated confirmation email.
3	Novelty / Uniqueness	Unlike solutions requiring expensive third-party machine learning APIs or complex scripts, this solution leverages ServiceNow Flow Designer's native no-code logic pills combined with dictionary-level dependent choice filtering.
4	Social Impact / Customer Satisfaction	Eliminates teacher anxiety and classroom instructional delays caused by faulty AV equipment or dropped network connections. Provides callers with peace of mind via automated confirmation emails.
5	Business Model / ROI Value	Cost Efficiency & Productivity Gain: Eliminates over 250 hours of annual manual triage labor for IT staff. Zero incremental software licensing cost since Flow Designer and Custom Tables are native capabilities.
6	Scalability of the Solution	Highly modular and extensible. The Flow Designer architecture allows administrators to easily append new keyword branches (e.g., 'Printer', 'Lab Software') or integrate automatic Assignment Group routing.
