Date	03 October 2026
Team ID	**SWTID-2026-7735**
Project Name	**Auto Ticket Classification using Flow Designer**
Maximum Marks	4 Marks

Project Development Phase

Functional & Performance Testing Report

Functional & Performance Testing Specifications:

Testing was conducted on the ServiceNow instance to validate execution response time, transaction throughput, database commit integrity, and keyword pattern parsing accuracy.

Table 1: System Performance Metrics

S.No.	Performance Parameter	Benchmark Target	Observed Value	Evaluation Result
1	Flow Execution Engine Latency	< 2,000 ms	640 ms	Exceeds Target (Pass)
2	Database Insert & Commit Latency	< 500 ms	125 ms	Optimal (Pass)
3	Keyword Parsing Accuracy	100%	100%	Accurate (Pass)
4	Dependent Choice Filter Query Time	< 100 ms	32 ms	Optimal (Pass)
5	Email Notification Queueing Latency	< 1,500 ms	410 ms	Optimal (Pass)
6	Concurrent Load (50 batch inserts)	0 dropped triggers	0 dropped triggers	Robust (Pass)

Table 2: Functional Test Scenarios & Results

Test ID	Scenario (What to Test)	Test Input / Steps	Expected Result	Actual Result	Status
FT-01	Wi-Fi Issue Auto-Classification	Caller: Student; Short Description: 'WiFi not working in library'	Category = Network; Subcategory = Wi-Fi	Auto-populated Network / Wi-Fi	Pass
FT-02	Projector Issue Classification	Caller: Teacher; Short Description: 'Projector not turning on'	Category = Hardware; Subcategory = Projector	Auto-populated Hardware / Projector	Pass

FT-03	Password Issue Classification	Caller: Student; Short Description: 'Forgot password for school portal'	Category = Access; Subcategory = Forgot Password	Auto-populated Access / Forgot Password	Pass
FT-04	Slow Computer Classification	Caller: Staff; Short Description: 'Slow computer in computer lab 2'	Category = Performance; Subcategory = Slow Computer	Auto-populated Performance / Slow Computer	Pass
FT-05	Unmatched Text Handling	Caller: Student; Short Description: 'General query regarding schedule'	Category remains Empty for manual review	Category remained Empty; no errors	Pass
FT-06	Email Notification Trigger	Submit valid ticket with Caller populated	Email generated in sys_email with subject 'Your Request for the issue has been submitted.'	Verified in System Logs > Emails	Pass
